

01 REGISTER

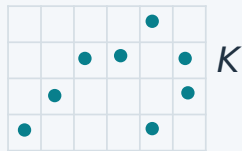

Depth + supplied pose

$$p_w = R_{wc}p_c + t_{wc}$$

02 RETAIN

One sample per world voxel

K lowest-priority voxels

03 REPLAY

Bounded support samples

One vote per replayed voxel

world target $q_t \rightarrow$ density demand

04 ALLOCATE

Foveated graph, $|V| \leq B$

Split / merge + hysteresis

Known-pose, static-scene setting

Architecture schematic
